

## **Universal Trac Gard Tractor Hydraulic Fluid Meets or Exceeds All Performance Requirements of Hy-Trans Ultra® (Case MS-1209)**

After extensive laboratory and field testing conducted by Universal Lubricants and the world's largest additive supplier, Universal Trac Gard has been proven to meet or exceed all the performance requirements of Case MS-1209 (Hy-Trans Ultra®).

Users can feel confident that Universal Trac Gard provides the protection and performance needed for all types of equipment that specify tractor hydraulic fluids (THF).

Universal Trac Gard eliminates the need to visit the OEM dealer for a specialty THF or the need to maintain special lubricant inventories.

Universal Trac Gard is recommended for all equipment requiring THF and is dyed blue for easy identification and to aid in leak detection. It is formulated to provide excellent oxidation resistance and its anti-wear characteristics protect bearings and gears even in the most extreme applications. Universal Trac Gard's multi-viscosity characteristics ensure superior pumpability at low temperature start-ups while maintaining viscosity at high operating temperatures.
